

Eris Industries selects Ledger as blockchain hardware security partner

Eris Industries, provider of the world's leading enterprise blockchain application platform, selects Ledger as hardware security partner to improve security of critical workflows and protect its blockchain-based infrastructure.

Ledger is a technological leader in the blockchain security industry and provides a wide range of trusted hardware solutions for both consumer and enterprise usage. The company established its ground in 2015 by putting on the market a best-selling smartcard based hardware wallet, and extended to the B2B market with TEE (Trusted Execution Environment) and HSM (Hardware Security Module) solutions.

Eris Industries is the maintainer of the free and open-source Eris Platform, the world's leading enterprise blockchain application development platform. Eris is used by the world's top companies, including PwC and 40 of the world's largest banks, and is the only blockchain application platform available on both Microsoft Azure and Amazon Web Services Marketplace.

"Ledger is at the forefront of providing tools to secure blockchains and manage private keys, said Casey Kuhlman, CEO of Eris Industries. Ledger's BOLOS platform is a crucial security offering which fills a vital security gap in the blockchain ecosystem. We are therefore very pleased to be working with Ledger, and together we will provide our users with the most flexible, capable, and user-friendly application development tooling in the market today."

"Eris Industries is a fast growing blockchain infrastructure provider for Fortune 500 customers, said Eric Larchevêque, CEO of Ledger. We are looking forward to deploying our solutions to their infrastructure and bring a strong layer of security to the management of critical workflows and cryptographic primitives."

About Ledger

Ledger is the leader for Trusted Hardware solutions applied to Blockchain technologies. Combining a strong expertise of security, smartcard, cryptography and embedded hardware, Ledger has been releasing a full suite of security solutions to answer the needs of the Blockchain industries (HSM, TEE integrations). Its first product, the Ledger Nano, first smart card based Bitcoin wallet, has been sold in more than 100 countries. Founded in 2015, Ledger is headquartered in Paris with offices in San Francisco.
